TeamMate

MESSAGING

ChatBridge

Teams, Slack and Webex. One conversation.

What it does

ChatBridge is real-time chat federation between Microsoft Teams, Slack and Cisco Webex. People message each other across platforms without switching apps, and messages flow both ways.

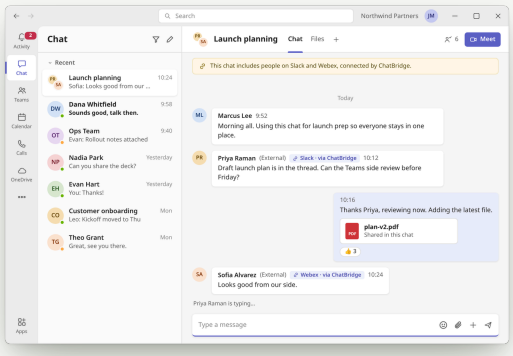

Key features

- **Real chat, both ways**
  Sender attribution, threading and formatting are kept.
- **Everything bridged**
  Reactions, files and images, and edited and deleted messages.
- **Channel, group and 1:1**
  Bridge channels, Webex spaces and direct messages.
- **Cross-tenant Teams**
  Connect Teams tenants from separate organizations without guest access.
- **SIP and XMPP**
  Protocol translation for legacy and on-premises UC platforms.
- **Your choice of storage**
  Unified mode stores all content in the tenant's SharePoint; Federation mode stores user content in the TeamMate cloud.

For partners

- White-label under your brand.
- Manage every federation from the TeamMate Provisioning Portal.
- SOC 2 Type 2 certified, hosted on Microsoft Azure.

How it works

1 Connect platforms
Standard OAuth and admin-consented API permissions.

2 Map channels
Choose which channels and spaces to bridge.

3 Messages flow
Users stay in their preferred app.

Requirements and licensing

- Admin consent for each connected platform.
- Nothing installed on end-user devices.

TeamMate Technology

30+ partners and 500+ service providers in 18 countries · 100% Microsoft Azure based, 9 geographic regions
